

Date of storm event: December 11-12, 2022

A surface low pressure developed in the southern canadian plains on December 10th and pushed southeast into the Ohio Valley. It then dove south into western New England through Sunday Morning December 11th and then further developed offshore Sunday afternoon and evening. Light Snow developed from 11 AM to 2 PM on Sunday December 11th and became steadier after sunset as the low pressure strengthed. Snow tapered off and then came to an end between Midnight and 3 AM Monday December 12th as the low pressure moved into the Canadian maritimes.

I attest that this report is a true and accurate account of weather conditions in the above mentioned area of the date(s) noted. All data was obtained from the official weather records maintained at The Connecticut Weather Center.
